

Trumpųjų mokslinių pranešimų sesija/Short scientific presentation session
Antras kambarys/The 2nd room

1. The changes of young basketball players÷ muscle strength and dynamic balance after specialised exercise program. Kamil Rudokait
2. Comparison of functional movements and dynamic stability of 14-15 years old football and basketball players. Gabriel Dobinskait
3. Does football players÷musculoskeletal system÷s functional indicators change after the rolling exercise program application? Kornelija Cylikait
4. Correlation between the changes of lower extremity muscle strength, balance and biomechanics indicators at different seasonal periods in young basketball players. Justina Remeikyt
5. The association between balance, coordination, mobility, reaction rate and cognitive function in patient after ischemic stroke. Evelina Dubinkien
6. The differential learning effect on lower limb function and gait in post-stroke patients. Markas Stankevi ius
7. Comparative analysis of functional movements and dynamic balance of bodybuilding and fitness representatives. Kipras Matuli nas
8. Visual feedback therapy for stroke patients. Change in balance. Eligijus Rup–ys
9. Physiotherapy effect for functional impairment in individual with chronic low back pain. Vaiva iufait
10. The effect of strength training program on lower extremities functional capacity in male adolescent football players. Eldoras Rim–a
11. Impact of individual constant workload and interval training on cardiovascular system indicators in patients after percutaneous transluminal angioplasty and stenting. Modesta Veli kait
12. Effectiveness of electrical stimulation used in pair with physical exercises on upper limb function in patients after stroke. Karolis Karalaitis
